Intro Rubric ITD 210

	Points	Earned
The root directory must be named **introduction**.	5	
Inside the root directory create directories named: **images**, **css**, and **screenshots**. Use them.	5	
Images: You are required to use at least one image: an image of yourself on the about.html page. You may use more images if you would like, but do not use more than a total of five images. Be sure you do not violate any copyright laws in choosing your image(s).	5	
Be sure **directory** and **file names** are **exactly** as specified. Be aware of where I use upper case letters vs lower case letters. [graded where bolded]		
about.html: Tell the class about yourself. To the extent you are comfortable, let us know who you are as a person. Hobbies? Pets? Favorite book or TV show? Include an image of yourself. Please do **not** name this or any other page inside the introduction directory index.html; this makes grading difficult.	5	
knowledge.html: Summarize what you learned in ITD 110, Web Design I. What do you think are your strengths? What are your weaknesses. If you have taken other web design courses, or had other relevant learning experiences, tell us about them.	5	
experience.html: Tell us about your experience coding websites. What tools do you use, and if you have any favorites let us know why. What websites have you built? Include links to a couple of websites you have created.	5	
goals.html: Tell us what you would like to accomplish in this class. Are there topics that were covered in ITD 110 that you found confusing and would like to learn more about? What new would you like to learn? Is there anything you feel it is especially important that we cover?	5	
humor.html: Tell us something funny.	5	
Styling: Use **one external style sheet** named **styles.css** to style your site. The styling does not have to be fancy, but it should be well organized and demonstrate that you are able to style **tag selectors**, **create and apply classes** appropriately, and **create and apply ids** appropriately. The styles.css file should be inside the **css** directory, which is inside the **introduction** directory.	tag 7 class 7 id 6 sum 20	
Indentation: Be sure you indent the HTML and CSS correctly. If you are not sure what correct indentation looks like, take a look at Shay Howe's code. If your indentation is incorrect, I will deduct **10 points** from your grade. I can't understand your code if it is not indented properly, and neither can you.	10	
Validate your **HTML5** and **CSS3**. Use the W3C HTML and CSS validators. Correct any errors, if needed, so all files will validate. Take a screenshot of successful validation for all pages. So that's six screenshots: five html, and one CSS. Put the screenshots in the **screenshots** directory, which is inside the **introduction** directory.	20	
Upload your root directory, **introduction**, to your NOVA **MyDrive** server space. (Be sure to upload the directory named introduction as well as the files in it.)	10	
Totals	100
